Case-Based Presentations @ OSU

Step 1: Group Students & Distribute Cases	**Create Groups & Case Problems:** Create groups of ~ 6 students (22-24 groups total). 4-6 different cases should be prepared and distributed among the student groups (each case will be reviewed by ~ 5 groups).
Step 2: Students review & complete cases	**Student groups work independently:** Working within a given time limit students will complete their case answering questions that will eventually lead them to develop diagnosis, treatment, and recovery plan.
Step 3: Students present each case	**Group Presentations:** Student will create and upload a presentation that provides an overview, diagnosis, treatment and recovery plan for their assigned case. Groups will then be randomly selected (representing all of the assigned cases) and given ~ 5 minutes to present their solution.
Step 4: Faculty Recap	**Engage students and ask questions:** Faculty should recap each case and provide more context (solutions and answers) when needed.
Step 5: After Class	**Provide solutions and support:** Post the preferred solution to each case on LCMS+ for students to review. Also, after reviewing each groups uploaded presentation, ensure that students completed their assigned case in a satisfactory manner and provide support if needed.
