The purpose of this is to better prepare physicians and medical students to identify individuals with opioid use disorders and to engage those patients in medication-assisted treatment for their opioid use disorder. Under the Drug Addiction Treatment Act of 2000, physicians are required to complete specialized training to qualify for a federal waiver to dispense or prescribe approved medication intended for addiction treatment.

Trainees attend this 8 hour live training taught by clinical expert, Dr. Jason Beaman & Dr. Kelly Dunn.
